ProQuant ANALYTICS

FRAUD & ANOMALY DETECTION · ONE-PAGE SUMMARY
Demo Client · 2026-04-01 to 2026-09-30

Demonstration. Built from synthetic data.

Do our fraud controls catch what they should?

Not fully.

The current rules find 57% of the confirmed fraud value. A score tested on data it never saw finds 99%, with fewer false alarms. Part of the fraud is not yet confirmed by anyone.

99%
of fraud value found, against 57% today

346
cases to review, 8 of them urgent

USD 417k
a year better than today, on confirmed fraud alone

Decisions needed

	DECISION	WHO	BY WHEN
1	Open the suspected ring now and let compliance decide on reporting (1 found)	Compliance	Today
2	Run the new score and rules in shadow mode for a month	System owner	Next month
3	Retire or tighten the noisiest current rule	Head of fraud operations	This quarter
4	Decide whether the gap in false alerts on Expat customers is justified	Compliance	This quarter

The evidence is in the report; the first cases are in the investigator brief; the rules are in the rule pack.
